

emnify is leading the switch to Consumer eSIM

Consumer eSIM with business-grade connectivity management

- ✓ Ditch costly SIM logistics by ordering directly from our web-shop and deploying instantly and remotely
- ✓ Deploy any number of devices instantly via MDM integration, QR code/activation code or apple universal link
- ✓ Manage which applications are accessible to your devices with DNS filtering
- ✓ Create a Zero-trust VPN with emnify SIMs and Cloud Connect
- ✓ Gain access to multi-network coverage with an average of 2 or 3 leading networks in every country. 540+ networks worldwide
- ✓ View real time usage, set data limits, block networks and manage different workspaces from within the emnify portal or API

emnify's Consumer eSIM solution is best suited to devices that do not require voice services, however, device validation and testing is advised for all potential devices.

3 ways to instantly deploy emnify's Consumer eSIM

MDM Integration

– Ideal for any number of devices

1. Enroll your devices in your MDM platform
2. You provide emnify with a list of EIDs
3. emnify provisions the devices EID's with eSIM profiles on our SM-DP+ platform
4. You send a push command via your MDM to the assigned devices
5. The emnify eSIM profile is now active when the device is turned on (no acceptance for the user is required)

QR Code/Activation Code

– Ideal for a few devices

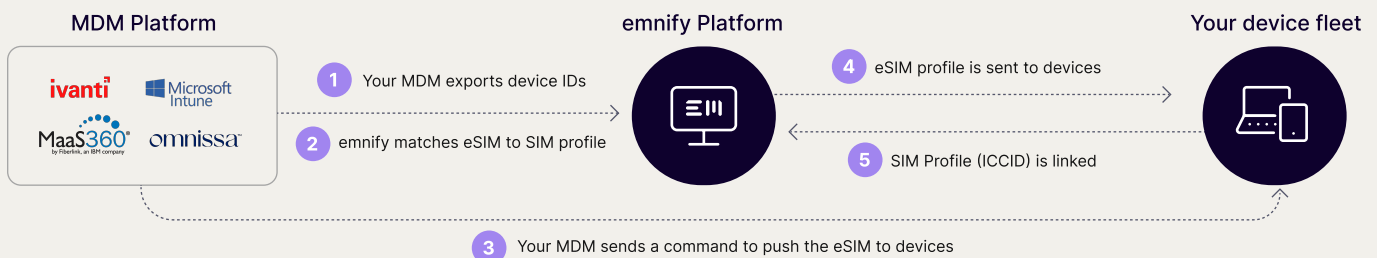

1. You order Consumer eSIMs from emnify's web shop
2. emnify generates QR codes/activation codes and shares them with you
3. You scan the QR codes using the camera on your device or input the activation code manually
4. Device download and automatically activates it

Apple Universal Link

– Ideal for a few devices

1. You order Consumer eSIMs from emnify's web shop
2. emnify generates a number of unique 'Apple Universal Links' and shares them with you
3. Click the 'Apple Universal Link' URL and you will be taken the eSIM activation screen
4. Upon clicking the link, the device retrieves the eSIM profile from emnify SM-DP+ server and automatically activates it

Instant eSIM deployments at scale via your MDM

The easy and secure provisioning of eSIMs via mobile device management has simplified device deployment at scale, ensuring pilots always have access to mission-critical applications without significant manual configuration upfront.

Read about how Lufthansa's Discover Airlines is using emnify's Consumer eSIM for instant deployment of 000's of Pilot iPads.
